

STEWART'S PATENT SUMMER AND WINTER COOKING STOVES.

THE ABOVE STOVES have become so generally known and so extensively introduced, that we do not deem it necessary to speak of their many good qualities, as they will tell their own story best. We warrant them and will give **FIFTY DOLLARS** in each instance that can be produced, where we have not taken back the Stove in case of failure and repaid the whole amount of purchase money. In three months we will send you

over 3400 of them. We caution the public against imitations from those who sell what they call "Improved Stewarts;" and the Stove maintains it originally without any improvement.

We have also a good assortment of the various patterns of Parlor, Office and COOKING STOVES, at 22 Union street

Important. Correction.

DENTAL SURGERY.

IT having been currently reported that, in consequence of the recent discovery of which I am the proprietor in this and foreign countries, I did not intend to prosecute my profession any longer, I take this opportunity not only to announce my intention to the contrary, but also to apologize to my patients and friends for any seeming want of attention for the last few months, assuring them that my profession has ever been uppermost in my mind. It now affords me great pleasure to say that I have made arrangements with Mr EDWARD WARREN of Boston, who has taken charge of my patent in

this country, and with JAMES A. DORR of London, who is my agent for Great Britain and her colonies; and that I am now fully prepared to resume my practice. And it is with the grateful sense of my obligations that I announce to my patients, that I have enlarged my DENTAL ESTABLISHMENTS, and perfected my manner of doing my work, and that I am in the possession of the most improved inventions that have ever been introduced into the practice. A method of overcoming pain in EXTRACTING TEETH and performing dental operations, and in surmounting difficulties usually attending the wearing of artificial teeth, such as moving about, lacerating the

jaws, impairing the speech, causing bad breath, not aiding in mastication, and to the great mortification of the patient, constantly dropping down, has been an object of strong desire in the profession from an early period. I have devoted several years to this important branch, and a triumph over these difficulties, as accomplished by my present inventions, cannot but be hailed as an important auxiliary to the comfort and happiness of mankind.

W. T. G. MORTON, 19 Tremont Row.

The following extracts are from late London Publications:—

Dr. Brout says, in a letter to the London Lancet, speaking of an extract from the opening address of the Hon. Edward Everett, President of the meeting, that he had employed it in several hundred cases of Dentistry. I understand that great confidence is placed in this discovery. It seems not easy to overrate its importance.—Dr. Robert Smith, of the University of London, writes to Dr. Brout saying: "It is a fine thing for the operating surgeon."—James A. Dorr to the London Lancet says: "I cannot see why the individual who, by his skill and industry invents the means of annihilating human suffering, is not fully and justly entitled to the credit of the man who makes an improvement in the manufacture of woolen or other fabrics."—From the London Lancet: "The realization of such an object cannot but rebound to the great

"He belongs."—*From the London Observer*: "I entertain the most confident hopes that at last a means has been provided which is beyond all fear of failure."—*From American Poetry*: "The poet's duty is to tell the truth, to conclude by congratulating my professional brethren on the acquisition of a mode of mitigating human suffering."—*Dr. George Hayward says*: "No ill consequences followed."—*The Standardist and Surgical Journal*. It is solely in the hands of a gentlemanly and humane profession."—*Dr. Cox, of New York, says*: "Such an improvement cannot fail to interest every man of common humanity." And again, "It is certainly a great boon to suffering humanity."—*From the Boston Herald*: "This discovery has this purpose has at length been discovered," she said. "Out of

"Its greatest fields lie in the mechanical art of Dentistry," Dr. Kimball, Dentist, New York, says. "For my own part, I believe the dental profession will find it of great value, and I shall do what I can to take it into the dental community." *Salem Gazette* says: "We take pleasure, unimpaired by Dr. Morton, in calling attention to a most important discovery of his, which seems to mark out a new era in the history of dentistry. We think it will mark our physical life, in the nineteenth century, as the discovery of ether has ever been before." *New York Herald* says: "It is a wonderful, most wonderful discovery!" *Newark Daily Advertiser* says: "The exhibition was successful in proving what Dr. Morton has long contended for." *New York* Dr. Bigelow, in the Medical and Surgical Journal, says—"If any plan were to have been devised for promoting the

comfort of the race, it would have been difficult to suggest one so wide in its application." "No one can doubt that an insupportable discovery has been made," says *Dr. Knickerbocker*, says: "God bless the inventor of this bag for to man!" *Dr. Pratt's Clinic*: "This is certainly a discovery interesting in the highest degree to the profession, as it is of importance to mankind!"
